Serial No. 1.

From the Senior Surgeon.
No. S.6.84, d 17.8.1928

Ids a report received from Dr. D. S. Puttanna giving an account of his studies during his recent deputation to Europe and outlining a scheme for adoption in Mysore and submits for consideration and orders of Govt. to proceed that a preliminary survey of local conditions and the prevalence of the disease may be made to be made by Dr. Puttanna before introducing the scheme in Mysore in accordance with his suggestions.

Desd:—

1) It is estimated that the scheme put forward by Dr. Puttanna, if introduced in toto, would involve an expenditure of Rs 4,04,000/- of which Rs 1,22,000/- would be initial expenditure and Rs 2,82,000/- would be the annual recurring charges. The Senior Surgeon thinks it not feasible to adopt the scheme in toto considering the heavy expenses involved. He suggests that a preliminary survey of the spread of the disease and of the local condition

Office of the Senior Surgeon
in Mysore

Bangalore Dated 17th August 1928

GENERAL MISCELLANEOUS BRANCH
1605
18 AUG. 1928

From.

B. Mahomed Usmon Esq., L.M.S.,
Senior Surgeon with the Government of
His Highness the Maharaja of Mysore, Bangalore.

To

Med. 60-28-1

R. Ranga Rao Esq., B. A., B.L.,
General Secretary to the Government of
His Highness the Maharaja of Mysore, Bangalore.

Sir,

I have the honour to forward the accompanying report received from Mr. D. S. Puttanna giving a brief account of the studies he made during his recent deputation to Europe and outlining a scheme for adoption in Mysore, for the prevention and treatment of Venereal Diseases. Appendices are added as to the methods of Anti-venereal campaign as practised in Europe and summarising the cost of the scheme if worked on the lines proposed by Mr. Puttanna. Designs for special Venereal Diseases Dispensaries are also included.

2. It will be kindly seen that the cost of initiating the scheme as suggested works up to about Rs. 4,04,000/- of which Rs. 1,22,000/- go towards initial expenditure and 2,82,000/- towards the annual recurring charges. It is clearly not feasible, considering the expenses involved, to adopt the scheme in toto. There are also the general considerations as to its suitability with reference to local conditions and the standard of public enlightenment and receptivity to new ideas and methods. The extent of the prevalence of Venereal Diseases, too, will have to be guaged before determining how much of the scheme can profitably be initiated. In these circumstances, I think it essential that Mr. Puttanna should be deputed to make a tour of special study and investigation in the different districts and supplement his present report with a statement of the actual existing conditions which have to cope with. It would do, for the present, if his tour is limited to all the District Headquarter towns and to a few selected interior places. I submit the question for the consideration and early orders of Government.

VI

I may add that I discussed the matter with Mr. Puttanna and he entirely agrees with me in the view that a preliminary surve of local conditions is necessary before applying practical measures.

The survey need not occupy much time and on completing it r. Puttanna may start the Venereal clinics in the Victoria Hospital.

I have the honour to be,

Sir,

Your most obedient servant

Sanitary Commissioner M.G.

From
D. S. PUTTANNA, Esq., B.A.,F.R.C.S.E.,
Surgeon, Victoria Hospital,
B a n g a l o r e.

To
B. MAHAMAD USMON, Esq., L.M. & S.,
Senior Surgeon in Mysore,
B a n g a l o r e.

(Through the Medical Officer, Victoria Hospital)

S i r,

I have the honour to submit the following detailed report re the training I underwent during my recent deputation to Europe sanctioned by Government in their Order No. G 783-4/Med.70-26-13 of the 20th July 1927 and the measures I would commend for adoption for the prevention and treatment of Venereal Diseases in Mysore.

2. I left Mysore on the forenoon of the 31st August 1927 and returned to duty in the Victoria Hospital Bangalore, on the forenoon of the 11th July 1928; and during this period, I took the opportunity of visiting some of the most important Venereal Diseases Clinics in England, Scotland, Vienna, Paris and Berlin and of getting myself acquainted with all aspects - both theoretical and practical - of the question of prevention and treatment of Venereal Diseases.

3. The first four months of my stay abroad, I spent at Edinburgh where I had the privilege of attending a Course of University Post-graduate Lectures on the Diagnosis and Treatment of Venereal Diseases by Dr. David Lees, President of the British Social Hygiene Delegation who visited Mysore last year. These lectures were quite exhaustive and instructive and they enabled me to acquire not only a comprehensive theoretical knowledge of the subject but also gave me some insight into the practical and clinical aspects as well

Forwarded
S. Subba Rao.
14/8/28

14/8.

in the profession thoroughly practical individual instruction the like of which it is impossible to obtain anywhere else, not even in the British Isles.

8. In addition to receiving regular courses of instruction in Edinburgh, Vienna and Paris as above, I managed to study first-hand the various practical means adopted in several other important V.D. Clinics, such as the St. Thomas' Hospital, the Lock Hospital, St.Peter Hospital, the All Saints' Hospital, St. Paul's Hospital and the London Hospital in London and two in the provinces, such as those in Glasgow and Liverpool, and a few in smaller towns such as Derby, Wigan etc., one in a sea-port town, such as Dundee and two V.D. Centres for soldiers such as the one at the Military Hospital, Glasgow and another at the Royal Military Hospital at Woolwitch. In all these places, I was able to study the scheme as practised in institutions of different magnitudes organised for different sets of people under varying circumstances.

9. While at Paris, I also visited the Hospital St. Louis and Hopital Cochine, the former accommodating no less than 1,000 syphilitics alone among numerous other patients suffering from other ailments. In Berlin I visited Dr. Felix Moses's V.D. Clinic at the Polyclinic Staedtiches Krankenhaus, Mobit, which is the well-known V.D. Clinic in Germany.

10. I also took the opportunity of seeing most of the Cinema films relating to venereal diseases in all the countries I visited with a view to study how the subject is expounded to audiences of different classes and sexes and was greatly impressed with the way in which an extensive use was made of them for purposes of propaganda.

11. Appendix I gives a general idea about the manner in which the anti-venereal campaign is tackled in Western Countries. The methods generally adopted

adopted there are the same all over with slight adaptations to suit local conditions and are based on the principle that by a wide dissemination of knowledge in Social Hygiene among the people by propaganda, by means of lectures, conferences etc., illustrated by lantern slides and cinema films, the people could be taught to successfully guard themselves against the infection or to submit themselves to curative treatment at the hands of properly qualified doctors.

12. I would now submit for the consideration of Government the following measures as being worthy of adoption for the prevention and treatment of venereal diseases in the State :-

13. On the preventive side, I would propose the formation of a Central Council of Social Hygiene for the State located in Bangalore with enough funds at its disposal for the purchase of (i) Cinema Films, (ii) Magic Lantern Slides, (iii) Models, (iv) Pictures, (v) Placards and (vi) Pamphlets on Venereal Diseases. By the aid of these, it will be the duty of the Council to carry on the work of propaganda among the people, with the co-operation, if need be, from its branches formed from time to time in other parts of the State. Propaganda are to the V. D. Scheme what advertising is to the success of any business. They should be designed to inform the public that venereal diseases are a scourge to humanity and should be combated by treatment of the infected at the earliest possible moment, if they cannot altogether be avoided by abstaining oneself from promiscuous intercourse and by leading a chaste life. They should also make it clear that all infected persons should be pursuaded by every means possible to go for skilled treatment immediately after exposure to infection and to remain under treatment until prounced permanently non-infective as otherwise the work of treating the patients is largely wasted as is unfortunately the case in this

2b

this Country at the present moment.

14. For this all-important phase of its activities I would propose the purchase of films named below which are all manufactured in Germany as they are the very best I have seen.

(1) Die Stadien der Syphilis,
(2) Syphilitische Verandrungen im Bereich der Genitalsphare,
(3) Angeborene Syphilis,
(4) Nachkankheiten der Syphilis,
(5) Klinik der Gonorrhoe, and
(6) Der weiche Schanker.

All these films appeal to every section of our people whether educated or otherwise as they depict vividly the actual horrors of the various manifestations of the several varieties of Venereal Diseases leaving nothing to be imagined or implied. The titles of all these films have of course to be translated into both English and Kannada which could bo done easily.

There is yet another German film named Geschlecht-skrankheiten which was being shown in London with its title translated into English under the heading "Dangers of Ignorance", five times a day, three times for men and twice for women, accompanied by a preliminary lecture by a doctor before each show. This film splendid as it is for a Western audience, is not quite suitable to our people who are not familiar with the social ways and amenities depicted in the film as it requires in consequence a great deal of effort to study, appreciate and take lessons from. It will, however, be useful to the intelligent section of our people as it is made in the form of an interesting story bereft of anything indecent.

Any of the above films should be shown to men and women separately and should be accompamied by lectures by a medical man or a lady doctor according to the sex of the audience to enable them to understand and appreciate the pictures and take lessonsfrom them with all eas

Suitable illustrated pamphlets giving abstracts and purports of the scenes depicted in the films may also be distributed to enable the people to follow the films and get the fullest benefit from their exhibition.

In addition to the films, I would propose the purchase of the Magic Lantern Slides which will be useful for propaganda in smaller places or to impress upon the people at some length about these diseases giving them time to think over.

Models and Pictures should also be obtained and made use of for purposes of demonstration at Exhibitions specially to the less intelligent section of our people.

This Council has also to procure and exhibit Placardsin railway stations, markets, railway carriages, hospitals, dispensaries, schools and colleges, hostels, hotels, choultries, courts, public offices and in jatras, in as many places in the State as possible, describing what should be done to prevent and cure venereal diseases in a way that is best suited to each place.

The Council has also to obtain and distribute suitable pamphlets on the prevention and treatment of venereal diseases among the literate. The Council will in these and ~~other~~ various other ways try its level best to lessen, if not prevent, the incidence of venereal diseases.

15. On the curative side I would propose:

(i) Immediate construction of Special Dispensaries for V.D. patients,

(ii) the allocation of extra In-Patient Beds for treating V.D. patients in the General Hospitals,

(iii) the provision for free Laboratory Diagnosis for all patients,

(iv) the provision for free supplies of special drugs,

(v) the Co-operation of the Child Welfare Centres, and

(vi) the provision for granting certain facilities to Indigent patients and sepoys suffering from venereal diseases.

Construction of Special Dispensaries: I would strongly urge the necessity for the immediate construction of Special Dispensaries of the type A and B as an annexe to the General Waiting Room in the Out-Patient Department for men and women patients respectively at the Victoria Hospital, Bangalore, and at the Krishnarajendra Hospital, Mysore; of type C and D at the District Hospital, Shimoga, and at the K.G.F. Hospital; of the type B at the Maternity Hospital in Bangalore and in Mysore; of the type C and D with an ablution cubicle at the Imperial Service Lancers Hospital in Bangalore; of the type E and F at the Local Fund Dispensary at Sagar and at Davangere, and of the same two types supplemented with an ablution cubicle at the Mysore Horse Dispensary in Mysore, as per rough sketches in Appendix III.

The Dispensaries may be opened in the morning; and in the evening not necessarily for treatment by medical officers, but for intermediate treatment of Gonorrhoea.

The two premier institutions in the State and the District Hospital at Shimoga have been selected for the immediate location of special dispensaries as they are resorted to by the largest number of V.D. patients.

The two Maternities have been chosen to cater to women and children who resort for treatment more willingly and with greater sense of secrecy to those institutions rather than elsewhere and also to treat pregnant women who resort for advice regarding their pregnancy, but are discovered by reason of disease found in themselves at first or from the fact of their children suffering from transmitted disease.

The Imperial Service Lancers Hospital at Bangalore and the Mysore Horse Dispensary at Mysore have been

been included to answer to the needs of our sepoys. They have been provided with Ablution Cubicles for abortive treatment which are so very effective in lessening the incidence of the disease.

The Local Fund Dispensary at Sagar has been singled out to cater to the needs of the comparitively large number of patients resorting for treatment there especially as there is after the monsoons every year an unusually heavy influx from down the Ghats of women of ill repute who largely contribute towards the incidence of these diseases there.

Davanagere and the K. G. F. ~~Dispensaries~~ are also included as they are both big industrial centres to which prostitutes frequently resort in considerable numbers from the surrounding places and keep up the high incidence of these diseases there.

Until such time as funds permit when more dispensaries will have to be opened in the order of their urgency in other District Hospitals and Taluk Local Fund Dispensaries, the Medical Officers in these institutions should be provided with the necessary outfits for the examination of blood etc., to enable them to diagnose, advise and whenever possible to treat some of these cases of venereal disease for which purpose necessary special drugs may also be supplied.

The allocation of In-Patient beds: As most of the institutions are already over-crowded, I would urge the immediate construction of additional In-Patient wards providing 10 beds for men and 10 for women in the Victoria and in the Krishnarajendra Hospital; 4 in the Maternity Hospitals in Bangalore and in Mysore; and 4 for sepoys and two for their wives in the Imperial Service Lancers Hospital at Bangalore; 2 for men and 2 for women at the District Hospital at

31

Wherever the Lady Health Visitor is not a doctor, the Child Welfare Centre should be visited by the Lady Medical Officer of the Station once a week, if not oftener, for this purpose.

Provision for granting facilities to sepoys and other indigent patients: Instances are not wanting of many an indigent patient in the mofussil who suffer and at times even die from the effects of the venereal diseases, if not from the evil effects of their treatment by quacks, for want of funds to convey him or her to the proper centre for treatment. Suitable provision should therefore be made for granting trainage or other charges for conveyance and for diet to such indigent patient wishing to resort to the special centre for treatment as is being done in the case of those resorting for treatment for leprosy or for anti-rabic treatment.

According to Mysore Service Regulations the sepoys among other employees in the State have the absence on account of their illness extending beyond 15 days treated as leave on half pay. This works out very hard in ~~xxx~~ cases of all illnesses but specially so in the case of illness from venereal diseases as it tends to deter them from seeking prompt and efficient treatment and to compell them to resort to inefficient treatment by quacks, if they cannot hide the disease from the proper authorities. They thus form a friutful source for the spread of infection among the people. Suitable modifications of the Service Regulations should be made for granting the sepoys and others leave on full pay instead of on half pay as is done now whenever they are suffering from venereal diseases if supported by a Medical Certificate that they are undergoing treatment at the hands of a qualified doctor.

Venereal Disease Officer: No scheme of anti-venereal campaign in the State is complete unless it has as its director a Venereal Disease Officer whose duty should

33

A P P E N D I X - I

A NOTE ON THE METHODS OF ANTI-VENEREAL CAMPAIGN AS PRACTISED IN EUROPE - - -

1. There are Social Hygiene Councils formed all over Europe. They try their level best to lessen the incidence of venereal diseases there by discouraging sexual mis-conduct by means of :-

i. Lectures on Social Hygiene illustrated by Cinema films or lantern slides to the general public and to the teachers of elementary and secondary schools, to whom is entrusted the training of so many young boys and girls;

ii. Conferences of parents inviting them to tell their children what they ought to know about sexual dangers;

iii. Personal talks to small audiences - such as shop-girls;

iv. Personal letters to individuals;

v. Tactful vigilance of especially the women-police against solicitation in streets; and

vi. By means of the distribution of pamphlets on Social Hygiene.

2. If, in spite of all this, people indulge themselves in promiscuous sexual intercourse, they are advised to avoid contracting venereal diseases, even after they have run the risk by resorting to Abortive Treatment by skilled disinfection within 24 hours of - exposure.

3. When people contract Venereal disease in spite of their resorting to Abortive Treatment, or otherwise, they are exhorted by means of suitable placards exhibited in the most frequented places like the public lavatories, railway stations etc., to resort to skilled treatment at the nearest V.D. Dispensary and not to a quack.

4. A special Venereal Disease dispensary is built in every General Hospital in all the provincial towns with one or more additional Ad hoc V.D. Clinics in some of the bigger towns, where free facilities are provided for the diagnosis and treatment of Venereal Diseases

on modern lines for everyone, irrespective of one's social rank or pecuniary status. Neo-Salvarsan and and other necessary drugs are administered here free of all cost to everybody. In addition, such of the General Practitioners who are in the opinion of the Venereal Disease Officer capapble of carrying on the treatment of Venereal Diseases, are also supplied with enough of Neo-Salvarsan and other drugs and outfits for collection of specimens of blood and other substances for Wassermann, for examination for Gonococci or Spirocheta or for preparation of vaccine etc. They are thus enabled to send their blood etc., with ease to the Pathologist of the nearest Laboratory who is expected to do the needful most expeditiously and free of all cost, and also to intimate the result within 24 hours by telephone or telegram.

5. The V.D. Clinics are run by the Venereal Disease Officer (who, in a big town, will be the Professor of Venereal Diseases) under whose direction, one or more specially trained assistants work. The patients get the best treatment for their ailments there, and are enjoined by means of placards and also by means of letters if they are defaulters not to stop away from the Hospital soon after the disappearance of the symptoms, but to go on attending it until they are pronounced cured by the Doctor. In addition, in most V.D. Clinics, there is a Lady Almoner who uses her influence in inducing the patients, not only to continue treatment, till they themselves are completely cured, but also to get all their contacts to submit themselves for examination and treatment which latter is one of the most important steps for the eradication of these scourges.

6. Maternity and Child-welfare Centres are run by full-time Lady Doctors and part time Specialists. The patients who resort to these Centres are examined for

(1) lectures and talks on Venereal Diseases to soldiers during Parades,

(2) by providing them with healthy out-door games, recreations and amusements, thus making their life in barracks more attractive than the streets, and

(3) by the construction of Special Ablution Cubicles provided with all necessary drugs and appliances one for each barrack where such of the soldiers as have run the risk, can resort to in all secrecy, disinfect themselves immediately without any of his compatriots knowing, and thus avoid contracting the disease altogether.

(4) When in spite of all these, a soldier is infected with Venereal Disease, he gets treated in the V.D. Hospital in the Barracks itself till he is completely cured. If, however, he is transferred elsewhere, his treatment card is sent with him to his new Station to enable the Medical Officer of the new Station to carry on the treatment to a successful termination.

9. In England and Scotland one million of pounds are being spent every year for the treatment of Syphilis and another million for the treatment of gonorrhoea alon 75% of these expenses incurred for the treatment of the Venereal Disease Scheme are met by the State Funds, the other 25% being borne by the Local Boards.

17)

A P P E N D I X III.

The Special Dispensaries are all designed to reduce to a minimum the movements of the staff and of the patients and yet to afford adequate privacy to the patients. In the bigger ones among them, examination and treatment rooms with partitions 7 ft. high open on one large service space where the staff an work and move easily from one room to another. The patients enter the rooms from outside corridors and are not allowed in the service space so that although the rooms are open to the service space an occupant of one room cannot see patients in the other rooms. When necessary, each room can be screened from the service space by a curtain. During the examination, the curtain shutting off the room from the service space is closed.

Each room is fitted so as to be as far as possible self contained and almost every detail of a routine examination can be carried out in it.

In the women's department, a dressing space is screened off at the backhof each room by a curtain so that the patient can prepare herself for examination and dress afterwards in complete privacy. During the examination, the dressing curtain is pushed to one side, and a curtain shutting off the room from the service space is closed.

From

D. S. PUTTANNA, Esq., B.A., F.R.C.S.E.,
Surgeon, Victoria Hospital,
Bangalore.

To

B. MOHEMAD USMON, Esq., L.M. & S.
Senior Surgeon in Mysore,
Bangalore.

(Through the Medical Officer, Victoria Hospital)

Sir

As called for in the General Secretary's letter No. G 3411/Med. 60-28-2 dated the 12th September 1928 received with your No. G.C.84-2 of the 18th idem, I have the honour to submit the following revised proposals regarding the Anti-Venereal Campaign in Bangalore and Mysore cities.

2. In my original report submitted to Government on the 14th August 1928, I urged the formation of a Social Hygiene Council at Bangalore with all the necessary equipment for propaganda and the construction of special dispensaries and wards in the leading medical institutions at Bangalore and Mysore at a cost of Rs. 2,31,225 with arrangements for the free supply of drugs if this scheme is considered too elaborate and costly for immediate adoption. I would submit the following modest suggestions for consideration.

3. So far as the preventive measures are concerned I find on further consideration that it is not possible to reduce the detailed estimates given at page 18 of my original report amounting in the aggregate to Rs 12,829 including the cost of films, projection apparatus, etc which are so very essential for propaganda work. Getting up films and the necessary equipment will take some time after sanction is accorded. In the meanwhile, propaganda work may be carried on with the help of magic

56

magic lantern slides, models, pictures, placards and pamphlets which can be obtained almost immediately.

4 Coming to the curative measures, the original proposals involved a cost of Rs. 1,18,460 for Bangalore and Rs. 98,621 for Mysore including a provision for the construction of pukka buildings for out-patients' dispensaries and in-patients' wards in the several hospitals in the two cities and also provision for a free supply of drugs. As the construction of pukka buildings is a question of time and cost, temporary structures in corrugated zinc sheets may be arranged to be put up for immediate use equipped with the necessary sanitary fittings, furniture, instruments and appliances which will be available for use later on when it is possible to replace the temporary structures by pukka buildings. The cost of these temporary structures together with sanitary fittings etc., will be Rs. 14,275 for Bangalore and Rs. 12,832 for Mysore. The minimum staff to run these institutions will cost another Rs. 7,932 for Bangalore, and Rs. 5,064 for Mysore, including the allowances to the veneral diseases office Until such time as funds permit for the construction of additional wards, arrangements will have to be made in each institution for reserving a certain number of beds for V. D. patients. As regards the free supply of drugs which involve, as per my original proposals, an expenditure of Rs. 39,859 for Bangalore and Rs. 38,284 for Mysore, I consider it necessary even now to make provision for these items but if this is not feasible, the free supply of drug might be confined to purely indig nt persons thereby reducing the cost to about Rs. 10,000 for each of the two cities.

57

5. Re the programme of work in Bangalore: I shall, if so ordered, be in charge of the V. D. work in the out-patients' department and in the in-patients' wards in the Victoria Hospital and shall also superintend similar work in the other institutions in Bangalore with the assistance of the officers that are already available and that may hereafter be added on in several institutions. As for the programme of work in Mysore, Dr. Robinson, whom I consulted in the matter, thinks it desirable for me to start the work there also side by side with Bangalore and superintend the same by paying visits for a couple of days every week leaving it to other officers to carry on the work on other days; and I agree with him in this view. As time permits, I shall also be prepared to go round the mills, schools and workshops in Bangalore and Mysore and also the District head quarters towns and other important places in the State for propaganda work and for the initiation of curative measures as far as possible. I shall in addition be prepared to deliver lectures on the up-to-date methods of diagnosis and treatment of venereal diseases to the M.B. and L.M.P. students of the Medical College and to the Post-Graduates.

6. In conclusion, I may add that the probable cost of the proposals now formulated would come to Rs. 74,932 for Bangalore and Mysore cities, as per details given in the Appendix. I beg that sanction for the same may kindly be obtained at an early date so that a beginning may be made in these two cities in the direction of anti-venereal campaign for which there is urgent necessity in almost every part of the State.

I have the honour to be,
Sir,
Your most obedient servant,

Bangalore:
14th Nov. 1928.

A. S. Puttanna.

Office of the Sanitary Commissioner
with the Government of Mysore,

Bangalore Dated 19th November 1928

GENERAL MISCELLANEOUS BRANCH
Govt 4043
28 NOV 1928

From

Dr. B.Mahomed Usmon, L.M.S.,
Sanitary Commissioner in Mysore, Bangalore.

To

R. Ranga Rao Esq., B.A., B.L.,
General Secretary to the Government of
His Highness the Maharaja of Mysore, Bangalore.

RR 19/11/28

Sir,

In reference to your letter No. G. 3411/Med. 60-28-2 dated 12th September 1928 requesting me to chalk out a programme of work for Dr. Puttanna for carrying out anti-venereal campaign in Bangalore and Mysore cities, and to submit it with necessary proposals regarding urgent requirements with details of cost etc., for consideration of Government, I have the honour to forward herewith a copy of letter received from Dr. D.S. Puttanna in the matter, and to request you to be so good as to obtain sanction of Government to the proposals contained therein at an early date.

I have the honour to be,

Sir,

Your most obedient servant

Senior Surgeon &
Sanitary Commissioner M.G.

From

D.S. PUTTANNA, Esq., B.A., F.R.C.S.E.,
Surgeon, Victoria Hospital, Bangalore.

To

B.MOHEMAD USMON, Esq., L.M. & S.,
Senior Surgeon in Mysore, Bangalore.

(Through the Medical Officer, Victoria Hospital)

Sir,

As called for in the General Secretary's letter No. G. 3411/Med. 60-28-2 dated the 12th September 1928 received with your No. G.C. 84-2 of the 18th idem, I have the honour to submit the following revised proposals regarding the Anti-Venereal Campaign in Bangalore and Mysore Cities.

2. In my original report submitted to Government on the 14th August 1928, I urged the formation of a Social Hygiene Council at Bangalore with all the necessary equipment for propaganda and the construction of special dispensaries and wards in the leading medical institutions at Bangalore and Mysore at a cost of Rs. 2,31,225 with arrangements for the free supply of drugs. If this scheme is considered too elaborate and costly for immediate adoption, I would submit the following modest suggestions for consideration.

3. So far as the preventive measures are concerned, I find on further consideration that it is not possible to reduce the detailed estimates given at page 18 of my original report amounting in the aggregate to Rs. 12,829/- including the cost of films, projection apparatus, etc., which are so very essential for propaganda work. Getting up films and the necessary equipment will take some time after sanction is accorded. In the meantime, propaganda work may be carried on with the help of magic lantern slides, models, pictures, placards and pamphlets which can be obtained almost immediately.

4. Coming to the curative measures, the original proposals involved a cost of Rs. 1,18,460/- for Bangalore and Rs. 98,621 for Mysore including a provision for the construction of pukka buildings for out-patients' dispensaries and in-patients' wards in the several hospitals in the two cities and also provision for a free supply of drugs. As the construction of pukka buildings is a question of time and cost, temporary structures in corrugated zinc sheets may be arranged to be put up for immediate use equipped with the necessary sanitary fittings, furniture, instruments and appliances which will be available for use later on when it is possible to replace the temporary structures by pukka buildings. The cost of these temporary structures together with sanitary fittings etc., will be Rs. 14,275 for Bangalore and Rs. 12,832 for Mysore. The minimum staff to run these institutions will cost another Rs. 7,932 for Bangalore and Rs. 5,064 for Mysore, including the allowances to the Venereal disease officer. Until such time as funds permit for the construction of additional wards, arrangements will have to be made in each institution for reserving a certain number of beds for V.D. patients. As regards the free supply of drugs which involve, as per my original proposals, an expenditure of Rs. 39,859 for Bangalore and Rs. 38,284 for Mysore, I consider it necessary even now to make provision for these items; but if this is not feasible, the free supply of drugs might be confined to purely indigent persons thereby reducing the cost to about Rs. 10,000 for each of the two cities.

5. Regarding the programme of work in Bangalore, I shall, if so ordered, be in charge of the Venereal Diseases work in the out-patients' department and in the in-patients' wards in the Victoria Hospital and shall also superintend similar work in the other institutions in Bangalore with the assistance of the officers that are already available and that may hereafter be added on in the several institutions.
